Technical Skills

Language: Java, SQL, JavaScript, TypeScript, C++

Frontend: Angular, HTML, CSS, RxJS

Backend: Spring Boot, Hibernate, REST APIs, Microservices

Messaging & Caching: Kafka, RabbitMQ, Redis, WebSockets, Event-Driven Architecture

Databases: MySQL, PostgreSQL, MongoDB

Tools: Git, Maven

DevOps & Cloud: Docker, Kubernetes, Jenkins, CI/CD, Azure

Core Concepts: Data Structures & Algorithms, OOP, DBMS

Education

L.D. College of Engineering (CGPA: 8.95)

Jul 2021 – Jun 2025

B.Tech (Hons) in Computer Engineering with Specialization in AI & ML

Ahmedabad, Gujarat

Experience

OPL Innovate

Jul 2025 – Present

Junior Software Engineer

Ahmedabad, Gujarat

- Built backend services for HSBC financial reporting platforms using **Java**, **Spring Boot**, **SQL**, and **Angular**, enabling **real-time analytics** and enterprise data access for 1,000+ users.
- Boosted Excel export performance for datasets containing **lakhs of records**, reducing generation time from 10–20 minutes to under 30 seconds through **asynchronous processing**, **multithreading**, and backend query optimization, streamlining enterprise reporting workflows.
- Stabilized **Angular** applications by resolving critical initialization, lazy-loading, and pagination issues, reducing production page-load failures by 80%+.
- Designed scalable asynchronous workflows for long-running operations using **concurrent processing** patterns, improving system responsiveness and request-handling efficiency.
- Improved API performance using **Redis caching**, backend query optimization, and efficient persistence strategies for high-volume enterprise requests.
- Contributed to **CI/CD**-driven Agile workflows, including debugging, deployments, production support, and application performance improvements.

OPL Innovate

Jan 2025 – Jun 2025

Intern - Software Engineer (Java)

Ahmedabad, Gujarat

- Engineered a responsive, full-stack flight booking platform using **Spring Boot**, **Angular**, and **MongoDB** for Jetwayz, handling real-time search and booking for 500+ users weekly, resulting in a 15% increase in task completion efficiency during usability testing.
- Implemented **event-driven architecture** using **Kafka** and **RabbitMQ** for asynchronous email notifications with PDF ticket attachments, improving system scalability and decoupling booking and notification services.
- Orchestrated and deployed admin management tools for handling flights, schedules, and passenger records, enabling 95% real-time operational accuracy and reducing manual intervention by 40%+ through workflow automation.

TatvaSoft

Jun 2024 – Jul 2024

Summer Intern

Ahmedabad, Gujarat

- Crafted a Virtual Community Support web application using **AngularJS**, **.NET**, and **PostgreSQL**, improving user engagement metrics by 15% through an intuitive UI and robust backend integration.
- Strengthened full-stack development and system integration capabilities, increasing data handling efficiency by 10% and improving overall application performance.

Projects

Django Chat Application | *Django, HTML, CSS, JavaScript, PostgreSQL, WebSocket*

Nov 2024

- Built a real-time chat platform using **WebSocket**-based messaging, authentication, profile management, and persistent chat handling, improving user engagement by 15%.
- Optimized **PostgreSQL** query performance and message retrieval efficiency by 20%, enabling low-latency real-time communication and scalable concurrent messaging.

BookYourShow | *ReactJS, CSS, Django Rest Framework, MongoDB, Stripe*

Aug 2024

- Constructed a movie ticket booking platform with real-time seat selection, **Stripe** payment integration, booking history, and secure **REST API** workflows.
- Enhanced booking workflows, UI responsiveness, and frontend state management, contributing to a 10% increase in user registrations during testing.
